Employment - Post-Doc Positions

Postdoctoral fellow position to work on Engineering Development

Research Program Overview
Two postdoctoral fellow positions are available in the Zandstra Stem Cell Bioengineering laboratory (http://stemcellbioengineering.ca/), which is in the School of Biomedical Engineering, and is affiliated with the Michael Smith Laboratories, at the University of British Columbia’s Vancouver campus. The successful candidates will be expected to investigate the use of pluripotent stem cells in modeling early development and tissue specification. This well-funded multidisciplinary program...

Post-doctoral Fellowship in Cancer Epigenomics
Application Deadline: May 31, 2018
We are seeking an innovative postdoctoral fellow who is interested in applying his/her expertise towards understanding the role of epigenetic dysfunction in human disease. The successful candidate will be embedded within a team of experimental and computational biologists and have access to a state-of-the-science epigenomic mapping pipeline and epigenomic datasets from primary cancer types and models. As part of national and international cancer research initiatives, s/he will direct a research program to uncover the...
