

Proteomics Core Facility

 [spray.jpg](#)

Since 2002, the PCF has been providing mass spectrometry and proteomic services to over 35 departments at UBC, as well as other Lower Mainland research labs including universities, non-profit organizations, hospitals, and biotechnology corporations. The facility has grown to include 8 mass spectrometers covering all forms of protein/peptide analysis, as well as robotic digestion and a myriad of upstream fractionation systems. Specializing in characterizing post translational modifications and quantitative proteomics, the facility has the ability to provide comprehensive analysis for a broad range of proteomics projects using the latest techniques. The fee-for-service structure is open to all researchers across North America. Training on specific equipment can also be arranged through the Long Term Collaborators program with web-based calendar booking and hourly rates for self-service.

Please contact our Analytical Specialist, Jason Rogalski (proteomics@mssl.ubc.ca), to arrange for a no-cost consultation.

Located in the NCE building, the PCF is open Mon-Fri, 9 AM to 5 PM PST. More information, including sample preparation; a description of all analytical services, equipment as well as an electronic submission form can be found on our web page: <http://pcf.mssl.ubc.ca>
